Designed for Stability

STABLEFARMS

~ Outrun the bear-market ~

Welcome to

Stable Farms

Welcome to Stable Farms! The first yield farm designed to thrive in the bear market.

Aimed at expanding utility in the DeFi space by bringing real use case features such as predictions, games and more
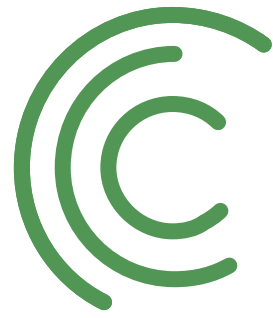

Welcome to

Stable Farms

Automatic Liquidity feature, using only stable coins to farm juicy rewards without the risk of loosing value by staking cryptocurrencies.

Simply choose your favourite stable coin USDT, BUSD, USDC, DAI and start earning by mining rewards.

Secure
At all
Times

Security, in the DeFi space, plays a
fundamental role. Stablefarms operates
beyond **highest** safety levels. Decentralized,
Open-Source, Transparent

Smart Contract Audit

○ **Security and trust play a key role in the DeFi space**

We have been audited by one of the most reputable audit companies, Techrate and Haze Crypto, available for all of our smart contracts (forked from PancakeSwap).

○ **Where to find it?**

Audit is available on the website as soon as its live.

Emergency Withdraw

When to Emergency Withdraw

If something happened to the front-end (DDOS) or any issue. Stable farms is ready with multiple backup links in case of any downtime to our main website.
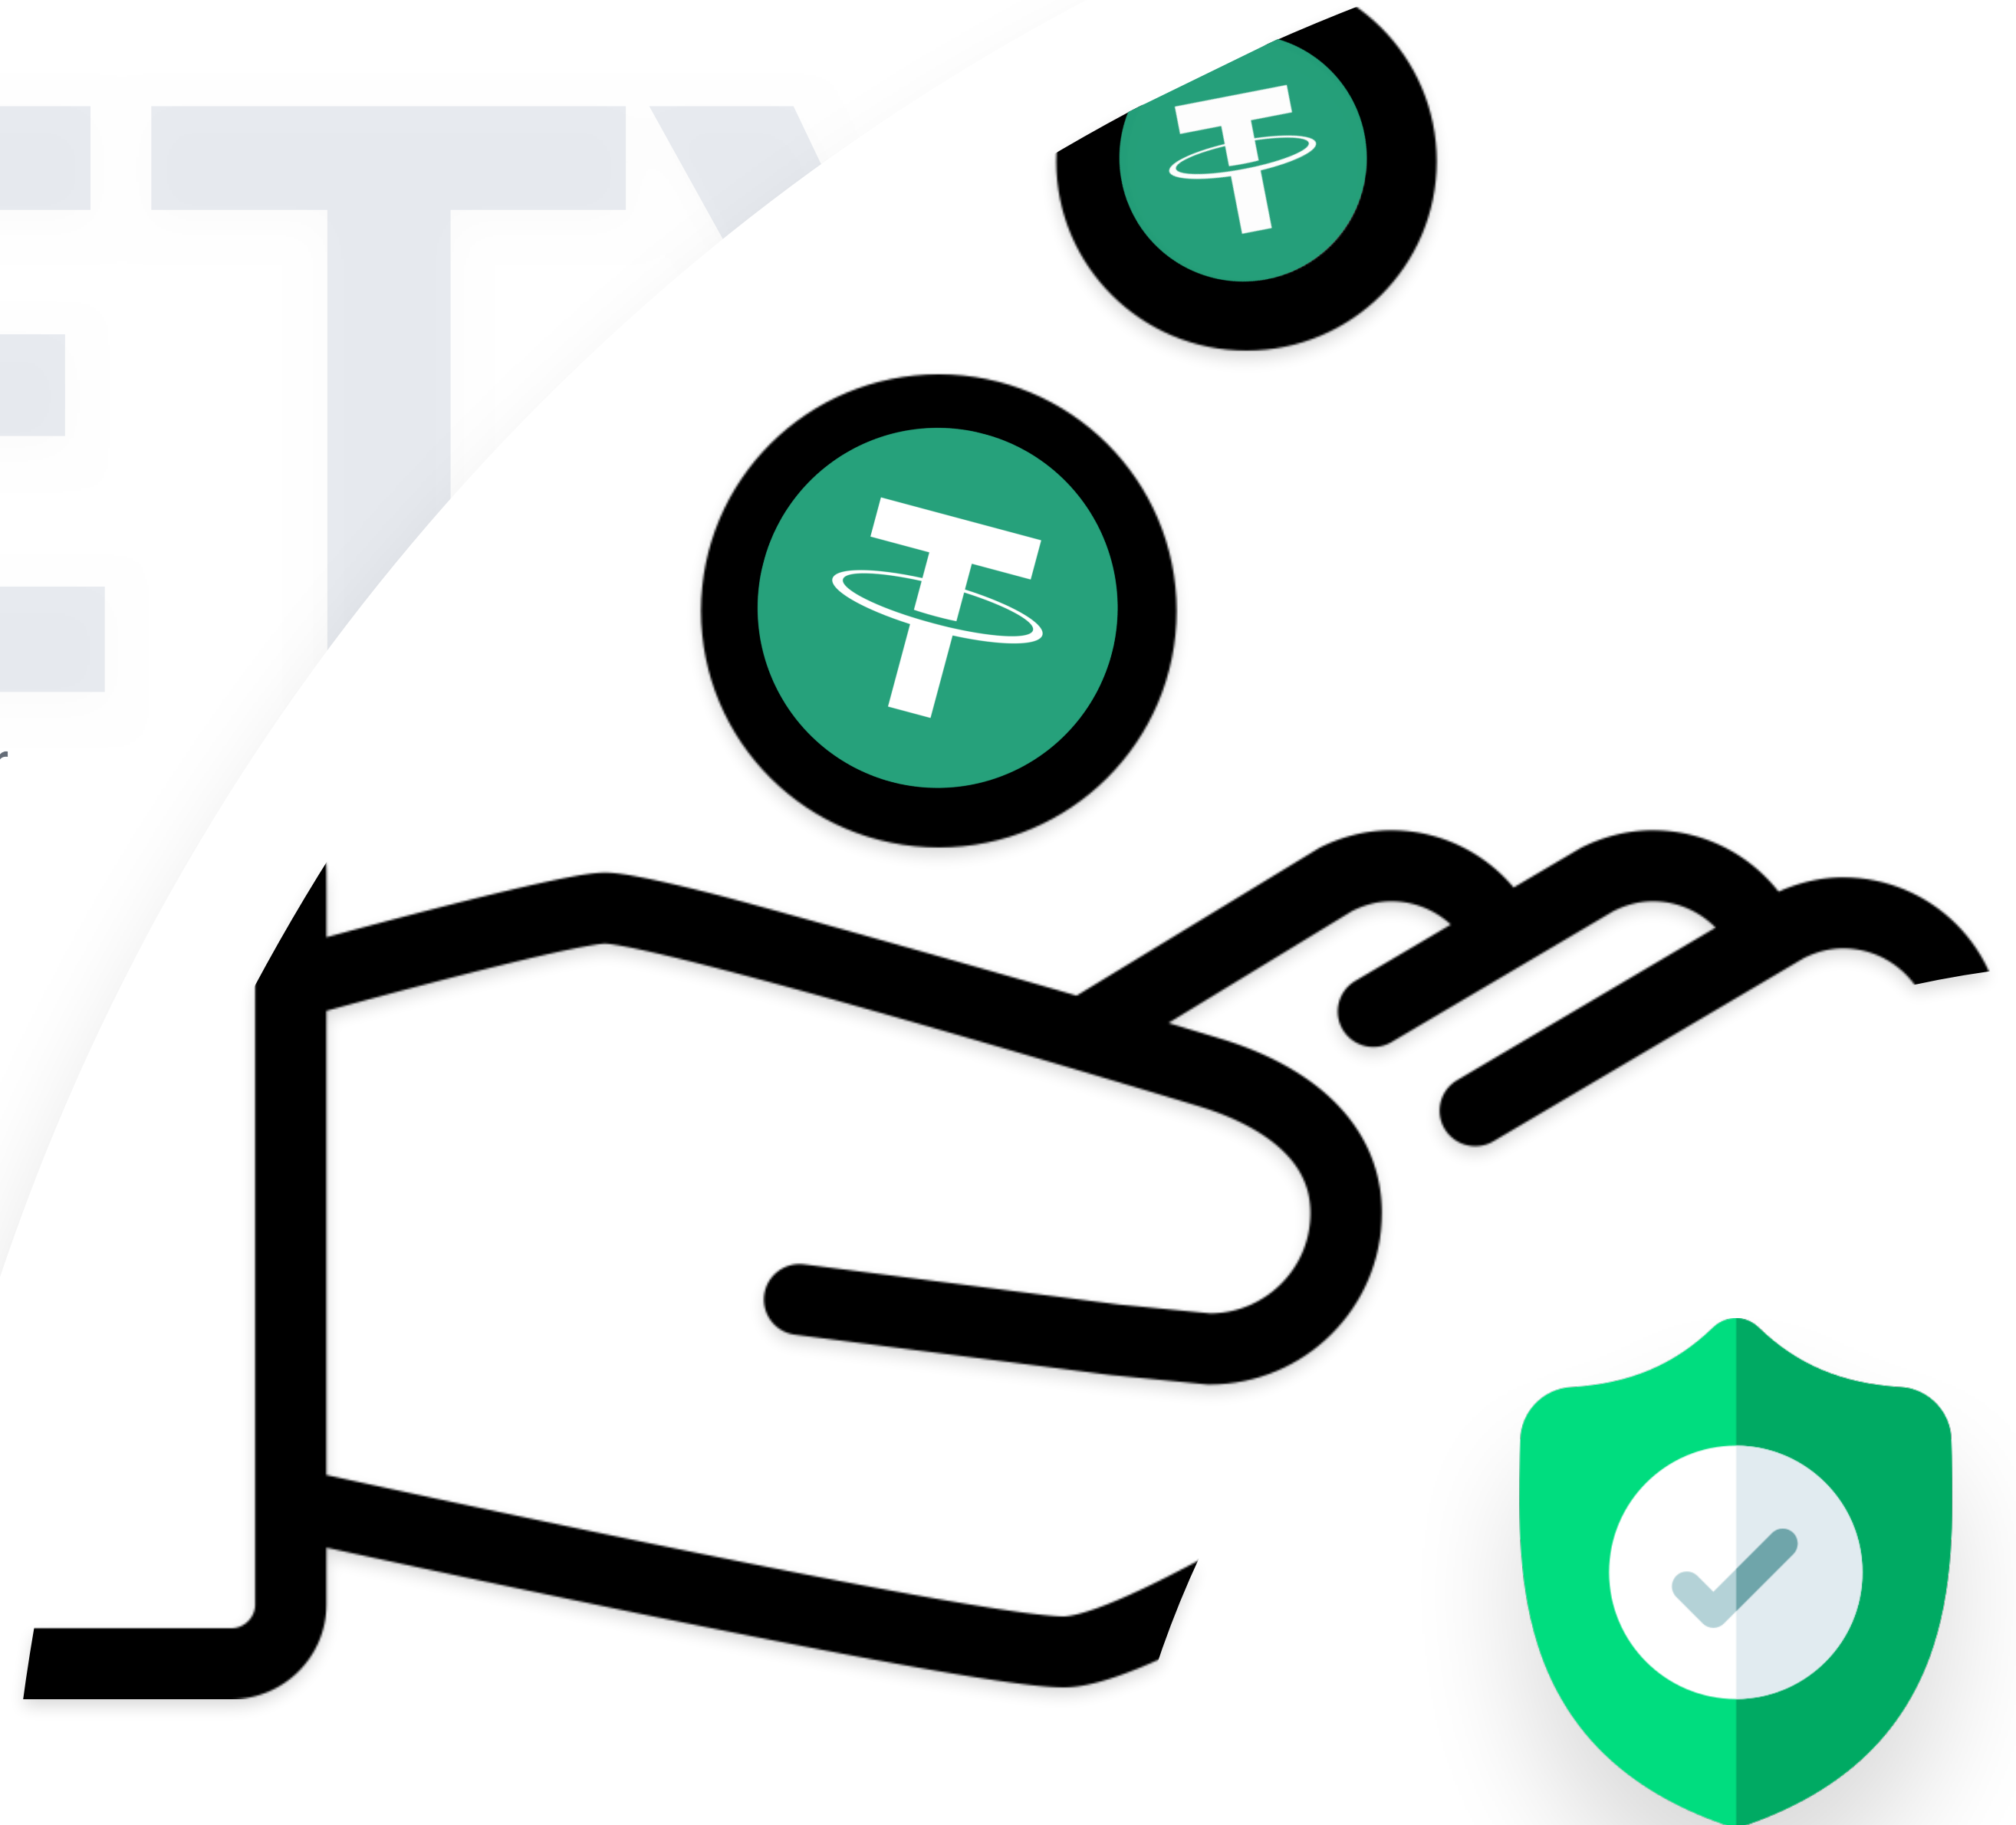

Your funds are safe, follow these steps:

Find the pool ID of your staked pool

Click the LP address

Click pancake LP button

Do an emergency withdrawal (Connect to web 3)

Implemented Timelock

○ **No Changes Possible**

Time-lock will be put in place before the farming begins and is owner of the Masterchef.
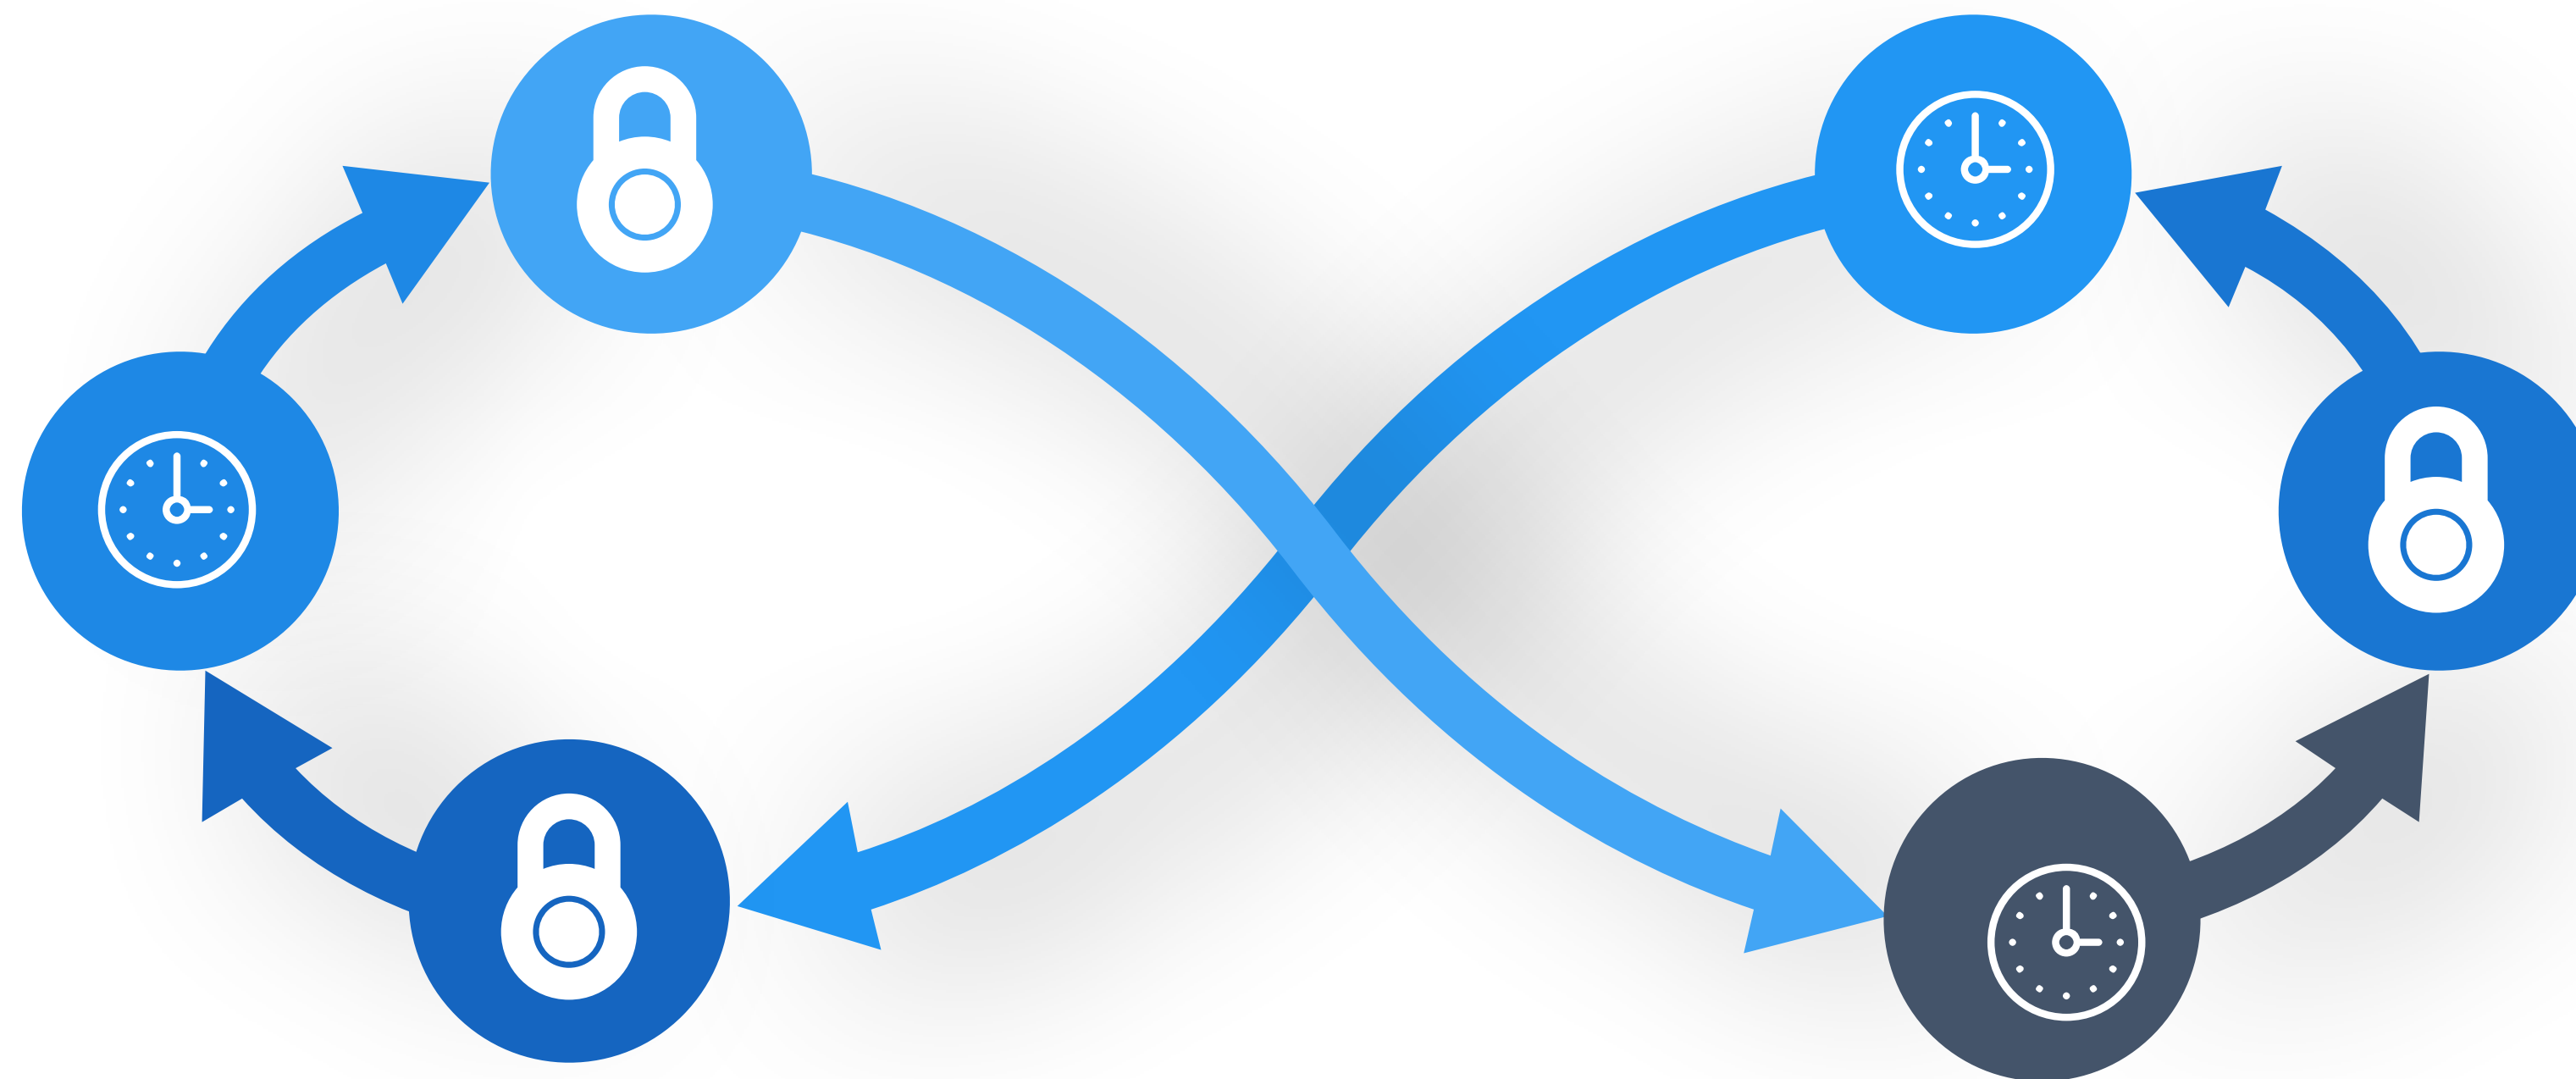

○ **Where can I find it?**

On the second last slide of this Litepaper

Timelock

Decentralized

Timelock

A hashed timelock contract (HTLC) reduces counterparty risk in decentralized smart contracts by effectively creating a time-based escrow. This type of smart contract requires the receiver of a payment to acknowledge it within a certain period of time or forfeit it.

# No Migrator Code

SAFETY

No Rug Possibility

Pancake swap can technically take all your money, even though they might not do it, the code is still present in their contract and this code is exactly how all the rug pulls happened and can be done.

What we have done

We have removed the following migrator code from our contract which was forked out from Pancake swap. You can see the following code is still present in pancake swap's contract and github.
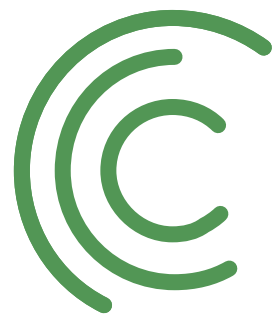

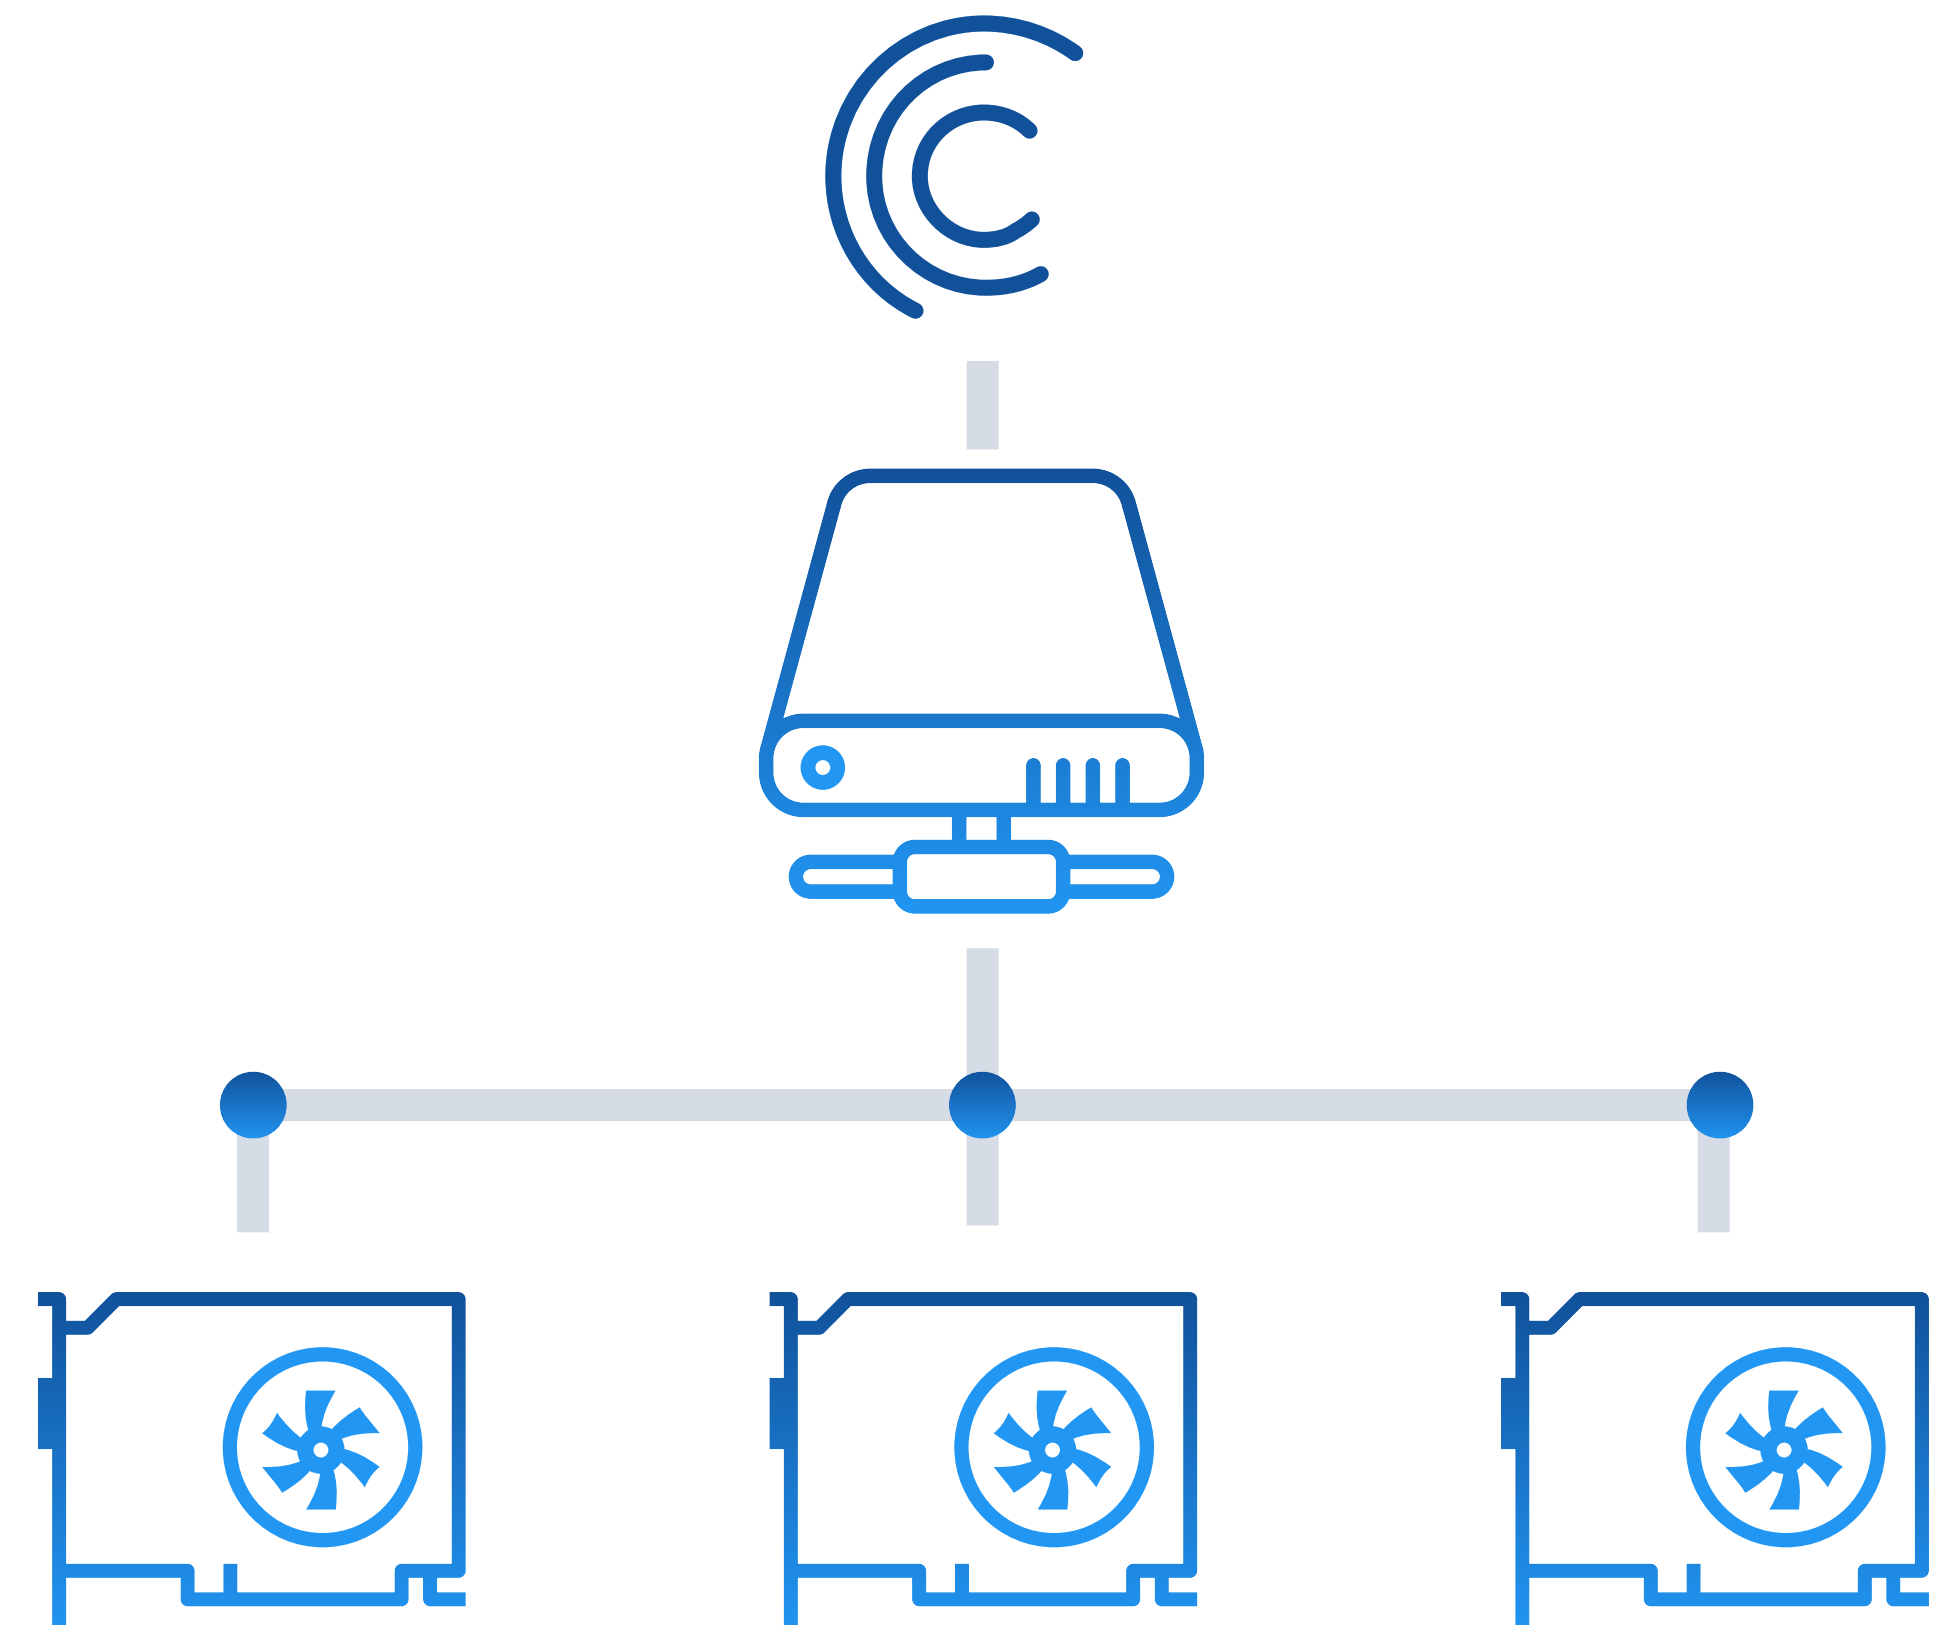

The
Concept

Token Name : FarmStable Token

- Token Symbol: FST

- Contract adress : Updated Soon

- Blockchain : Binance Smart Chain (BEP20) - Max Supply :

Unlimited

Emission Rate

New FSTABLE/Block = 0.5 (initial emission rate).
The emission rate will be adjusted gradually by community vote.

Fees
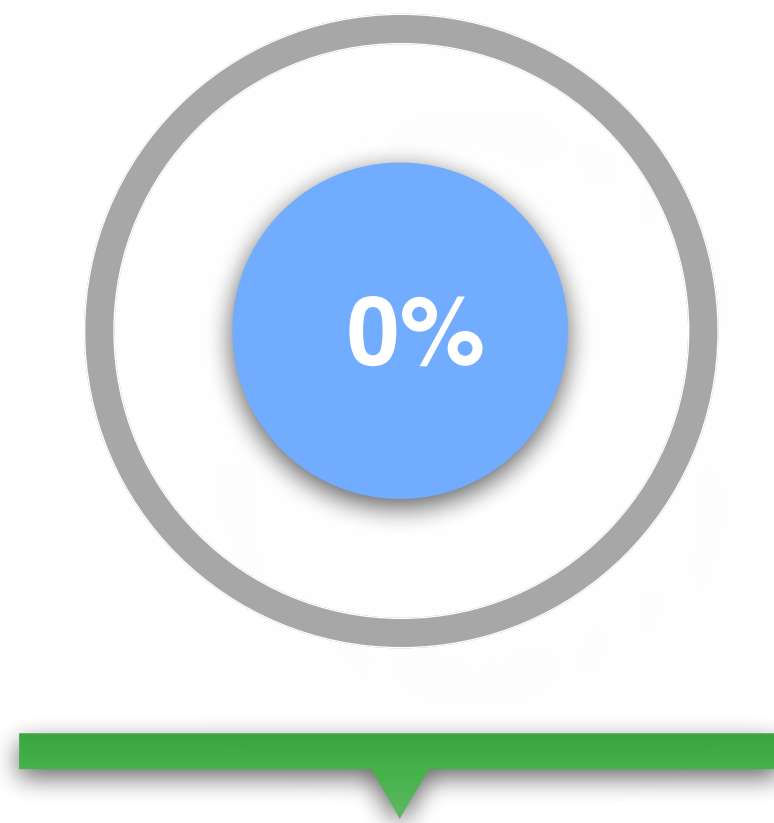

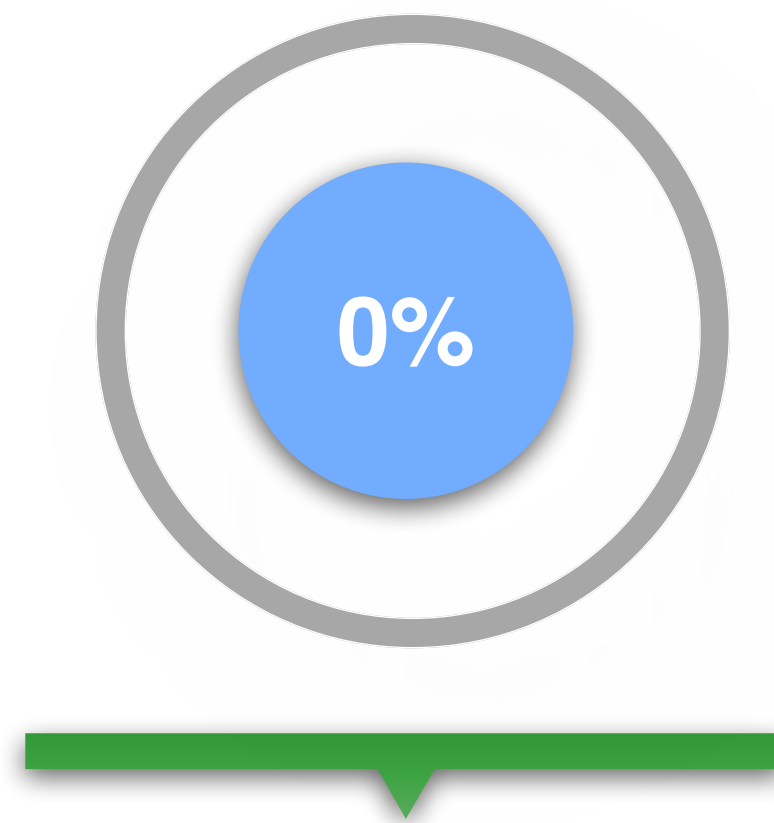

3%

0%

0%

0%

3% Staking Fee

Deposit fee is 3% for non-FSTABLE Farms/Pools.

0% Staking Fee

Deposit fee is 0% for native Farms/Pools.

### 0% Unstaking Fee

Unstaking fee is 0% for non-FSTABLE Farms/Pools.

0% Unstaking Fee

Unstaking fee is 0% for native Farms/Pools.

What are the Fees used for?

65%

35%

65% Roadmap
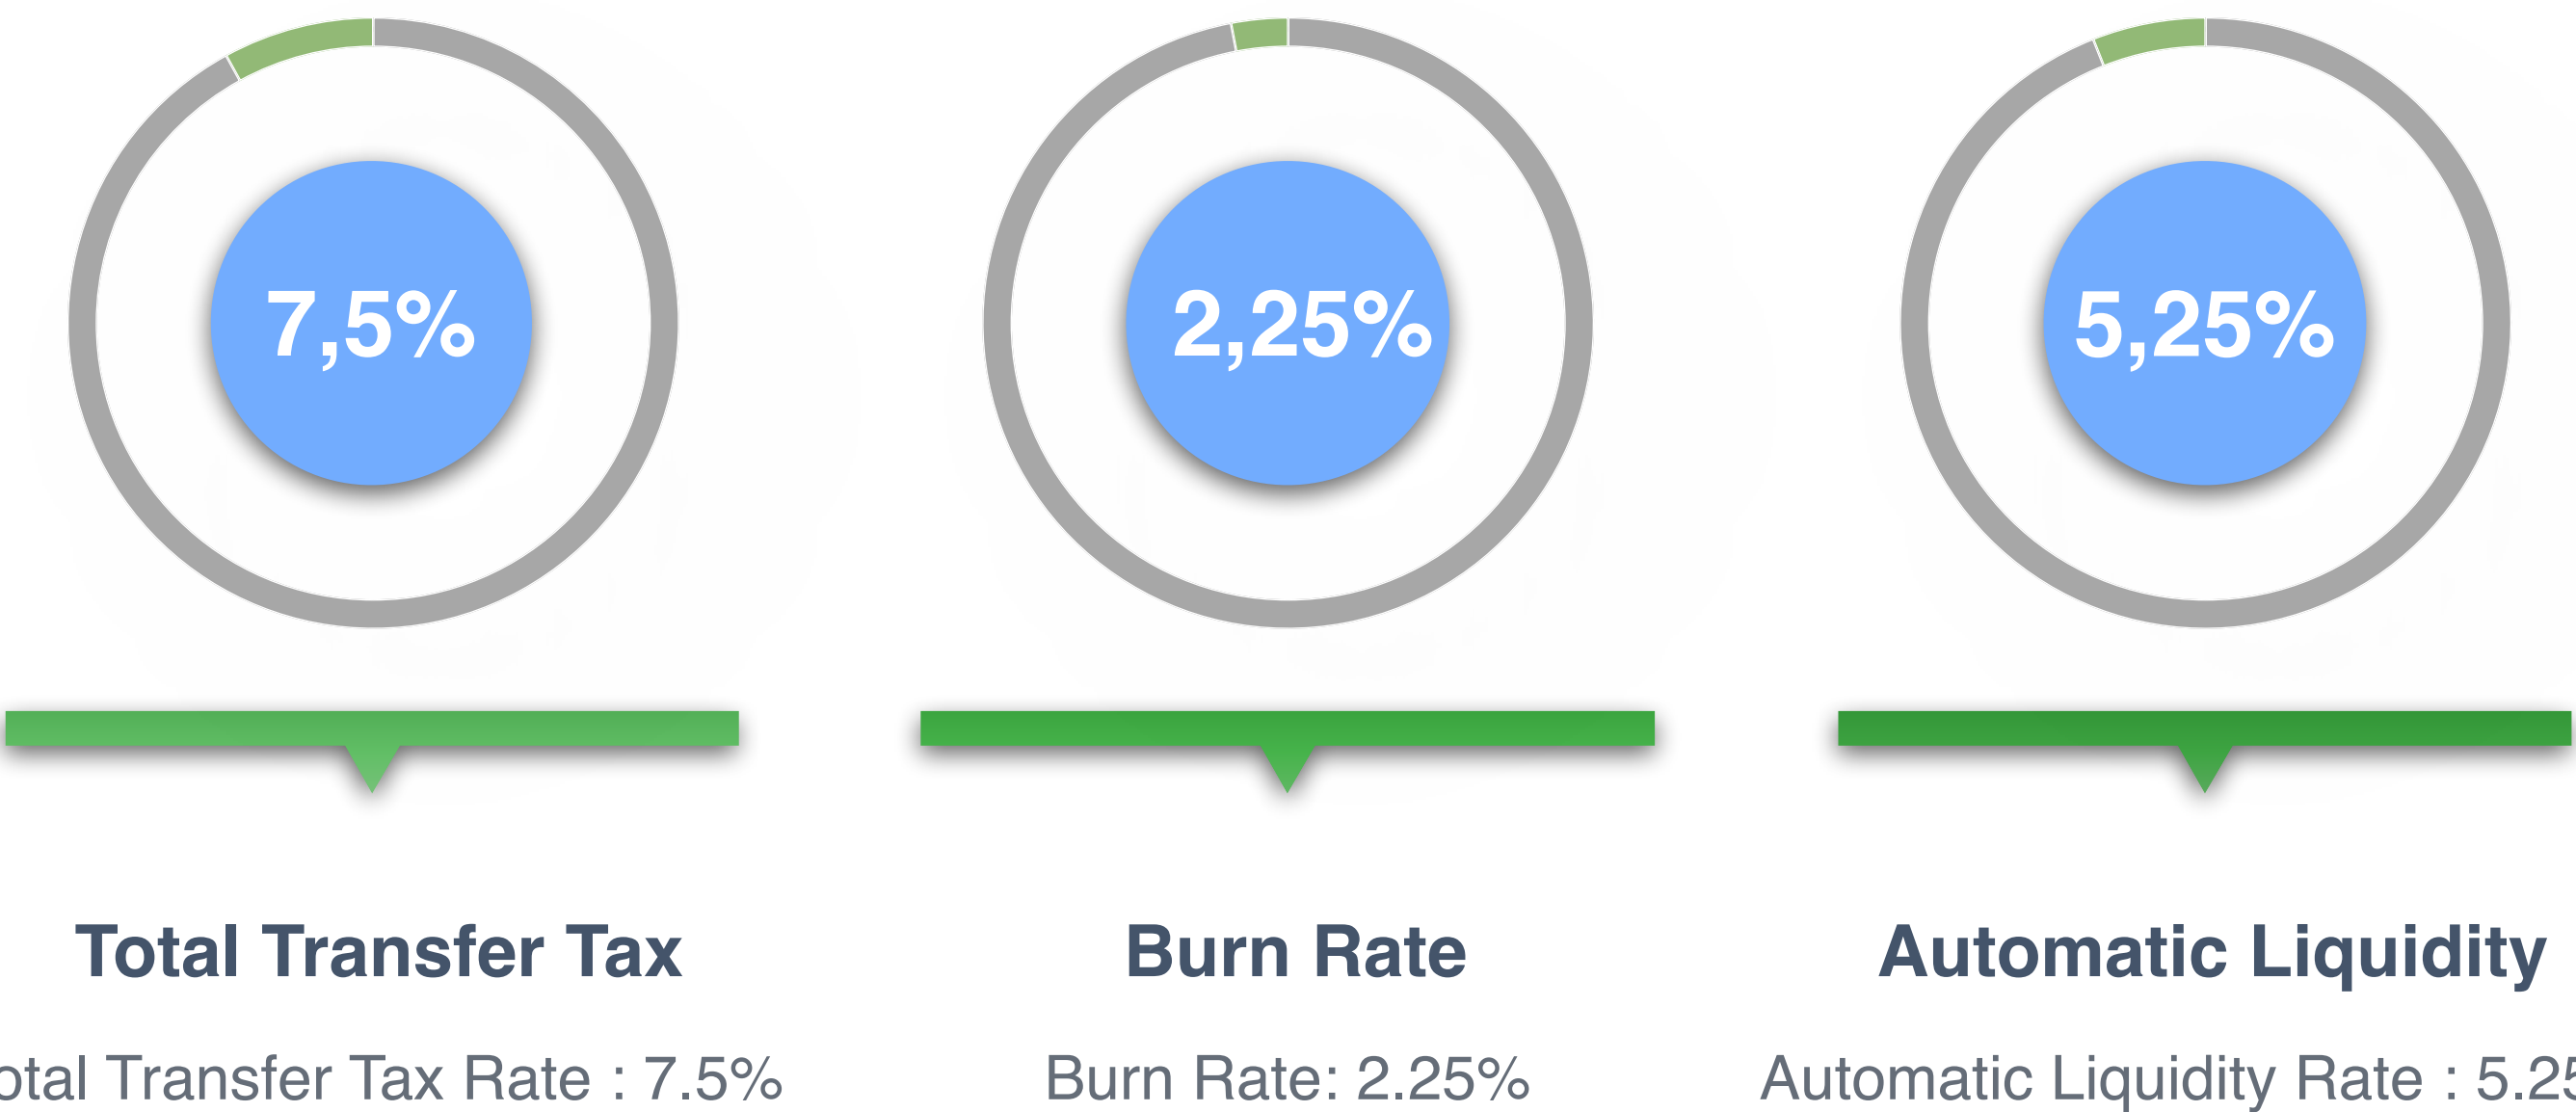

65% will be allocated to project development of the roadmap

35% Buybacks/Marketing

35% will be used for further advertising and buybacks of FST

Transfer Tax

7,5%

2,25%

5,25%

Total Transfer Tax

Burn Rate

Automatic Liquidity

Total Transfer Tax Rate : 7.5%

Burn Rate: 2.25%

Automatic Liquidity Rate : 5.25%

Every transaction (send, swap, farming, etc.) of FSTABLE will be charged with a 7.5% transfer tax. Use 8%+ slippage to buy FSTABLE on PancakeSwap V2 or other AMM.
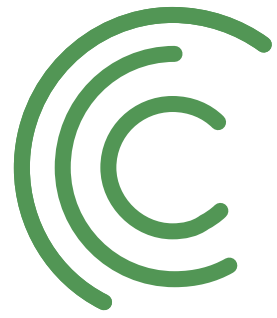

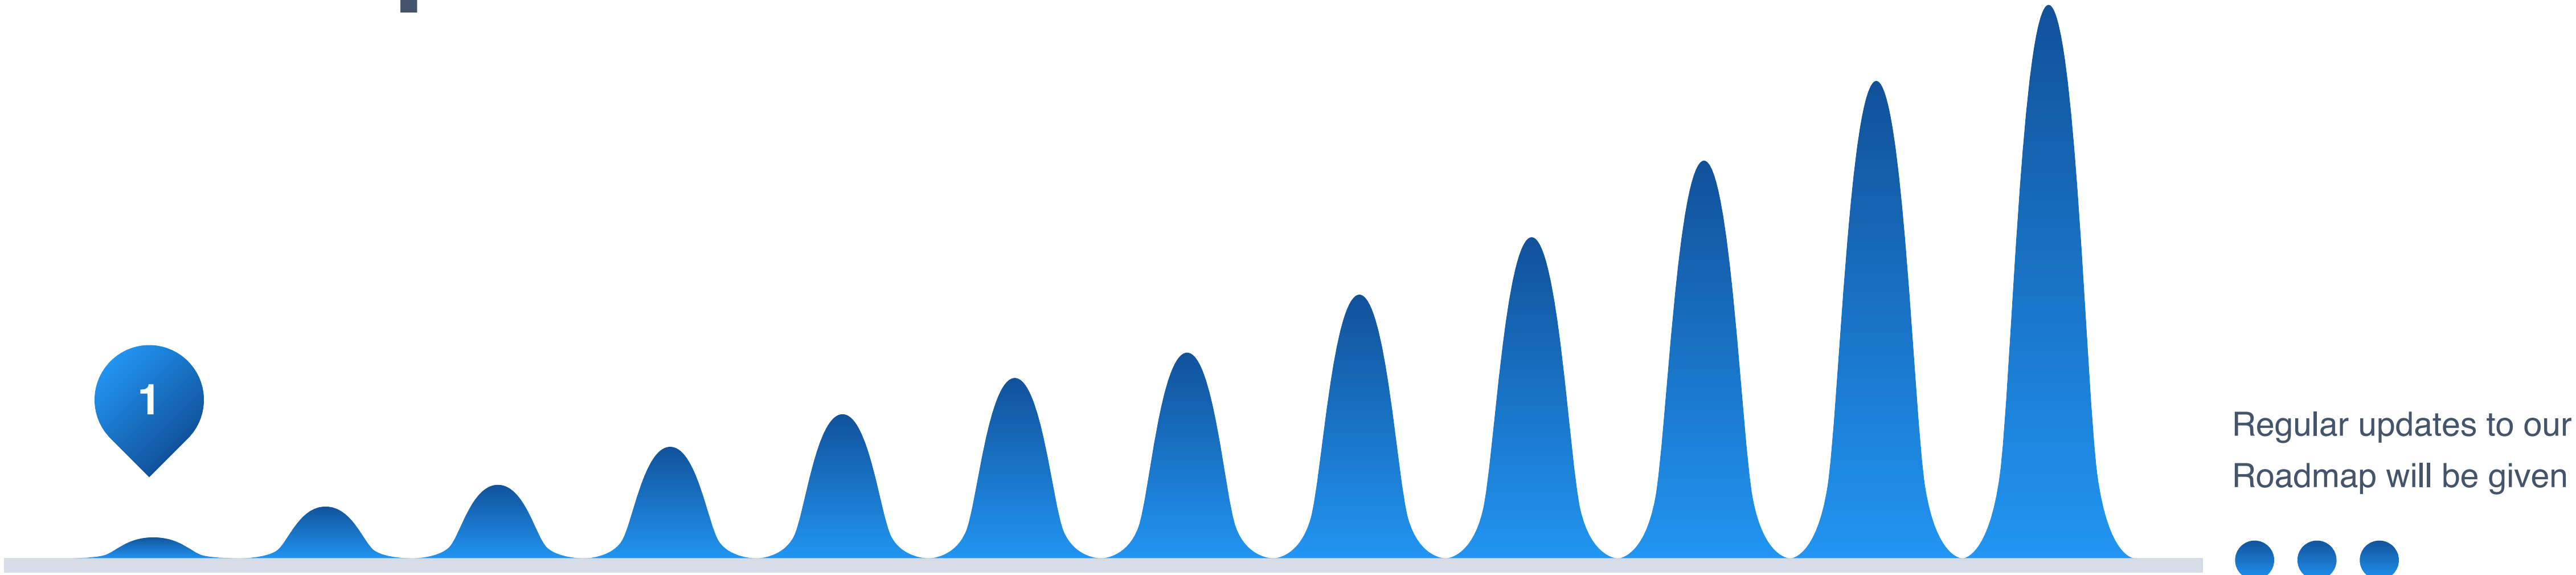

Our
Roadmap

We have carefully planned out the future of stable farms, putting into place all necessary steps in order to create a sustainable and long lasting platform

Roadmap

Regular updates to our
Roadmap will be given
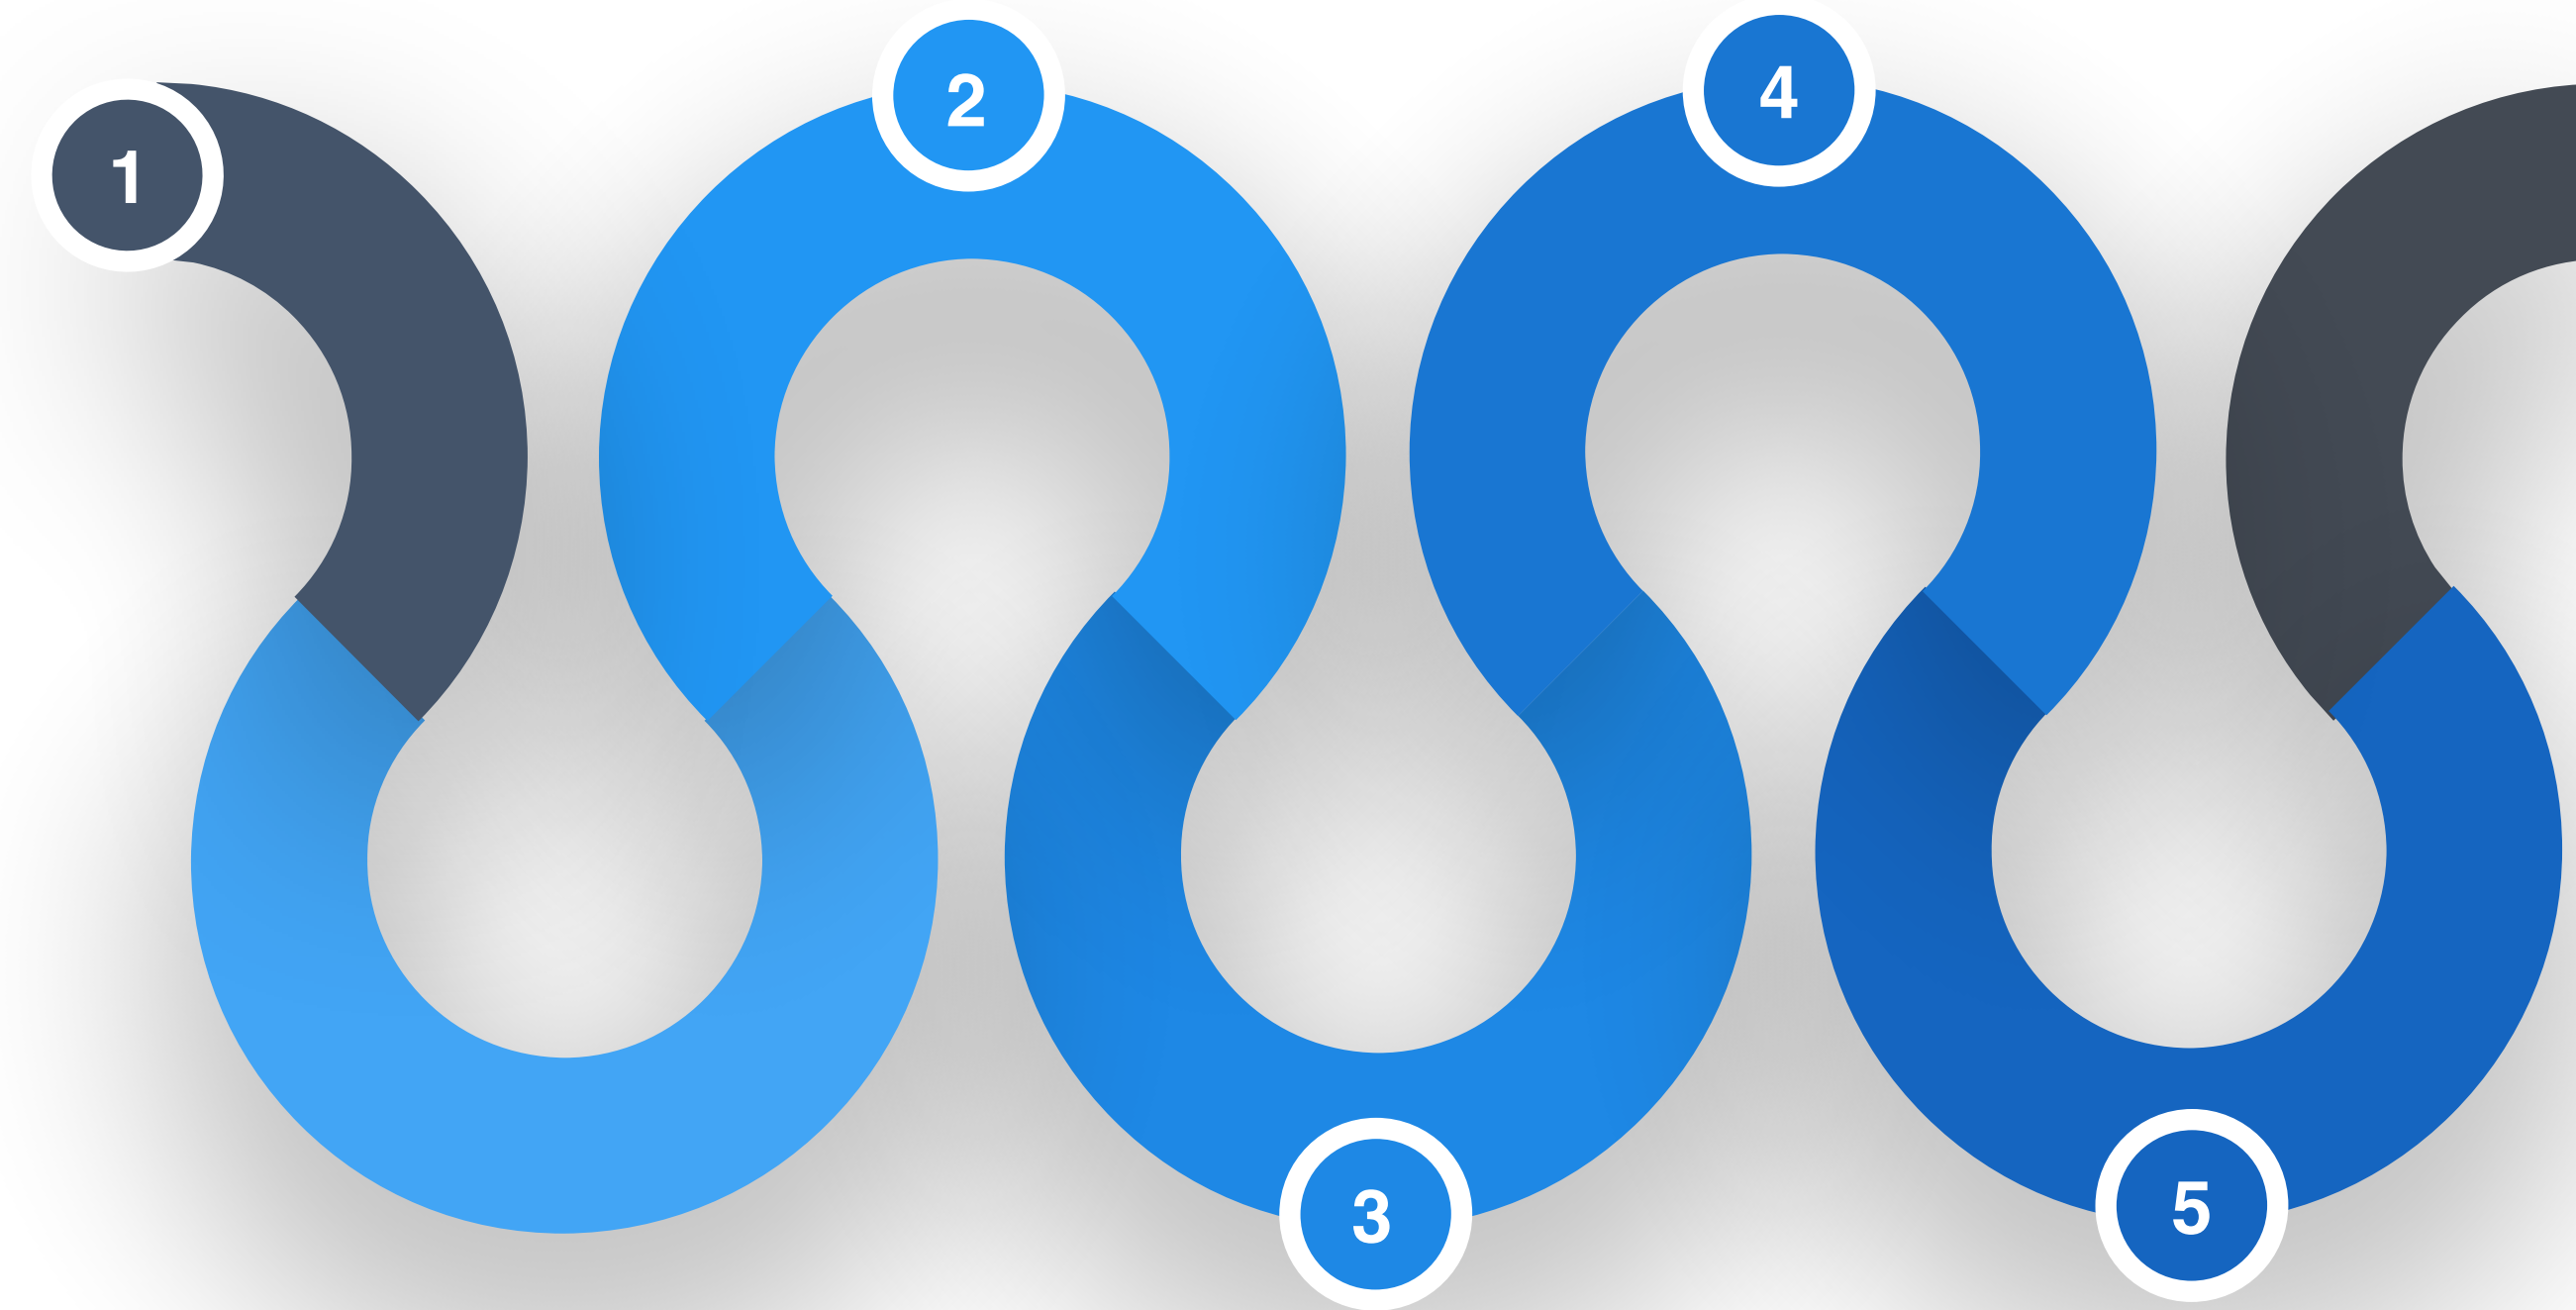

Number One
Build Dapp

Number Two
Community Building

Number Three
Deploy smart
contracts

Number Four
Audit (Techrate,
Mythx) RugDoctor will
check too

Number Five
Listing on Coingecko,
Dappradar,
Coinmarketcap

Number Six
Marketing on
Telegram, Twitter,
Reddit & Youtube

Number Seven
Farm opening &
Staking pools

Number Eight
Lottery

Number Nine
Predictions

Number Ten
Partnerships

Harvest
Lockup

We use harvest lockup based on time.
Harvest lockup is a unique and creative farming reward lockup mechanism.
This mechanism can help us limit the frequency of harvest to prevent farming arbitrage bots from constantly harvesting and selling.
Harvest Lockup : 6 days. After this period, you can harvest all FST tokens.

Automatic Liquidity

70% of the 7.5% transfer tax will be added to the FSTABLE-USDT liquidity pool through the contract automatically.

The automatic liquidity will be added on PancakeSwap v2. The automatic liquidity will be locked weekly.

All liquidity added by the automatic liquidity acquisition will be locked in FSTABLELocker contract.

LIQUIDITY

LIQUIDITY

LIQUIDITY

START
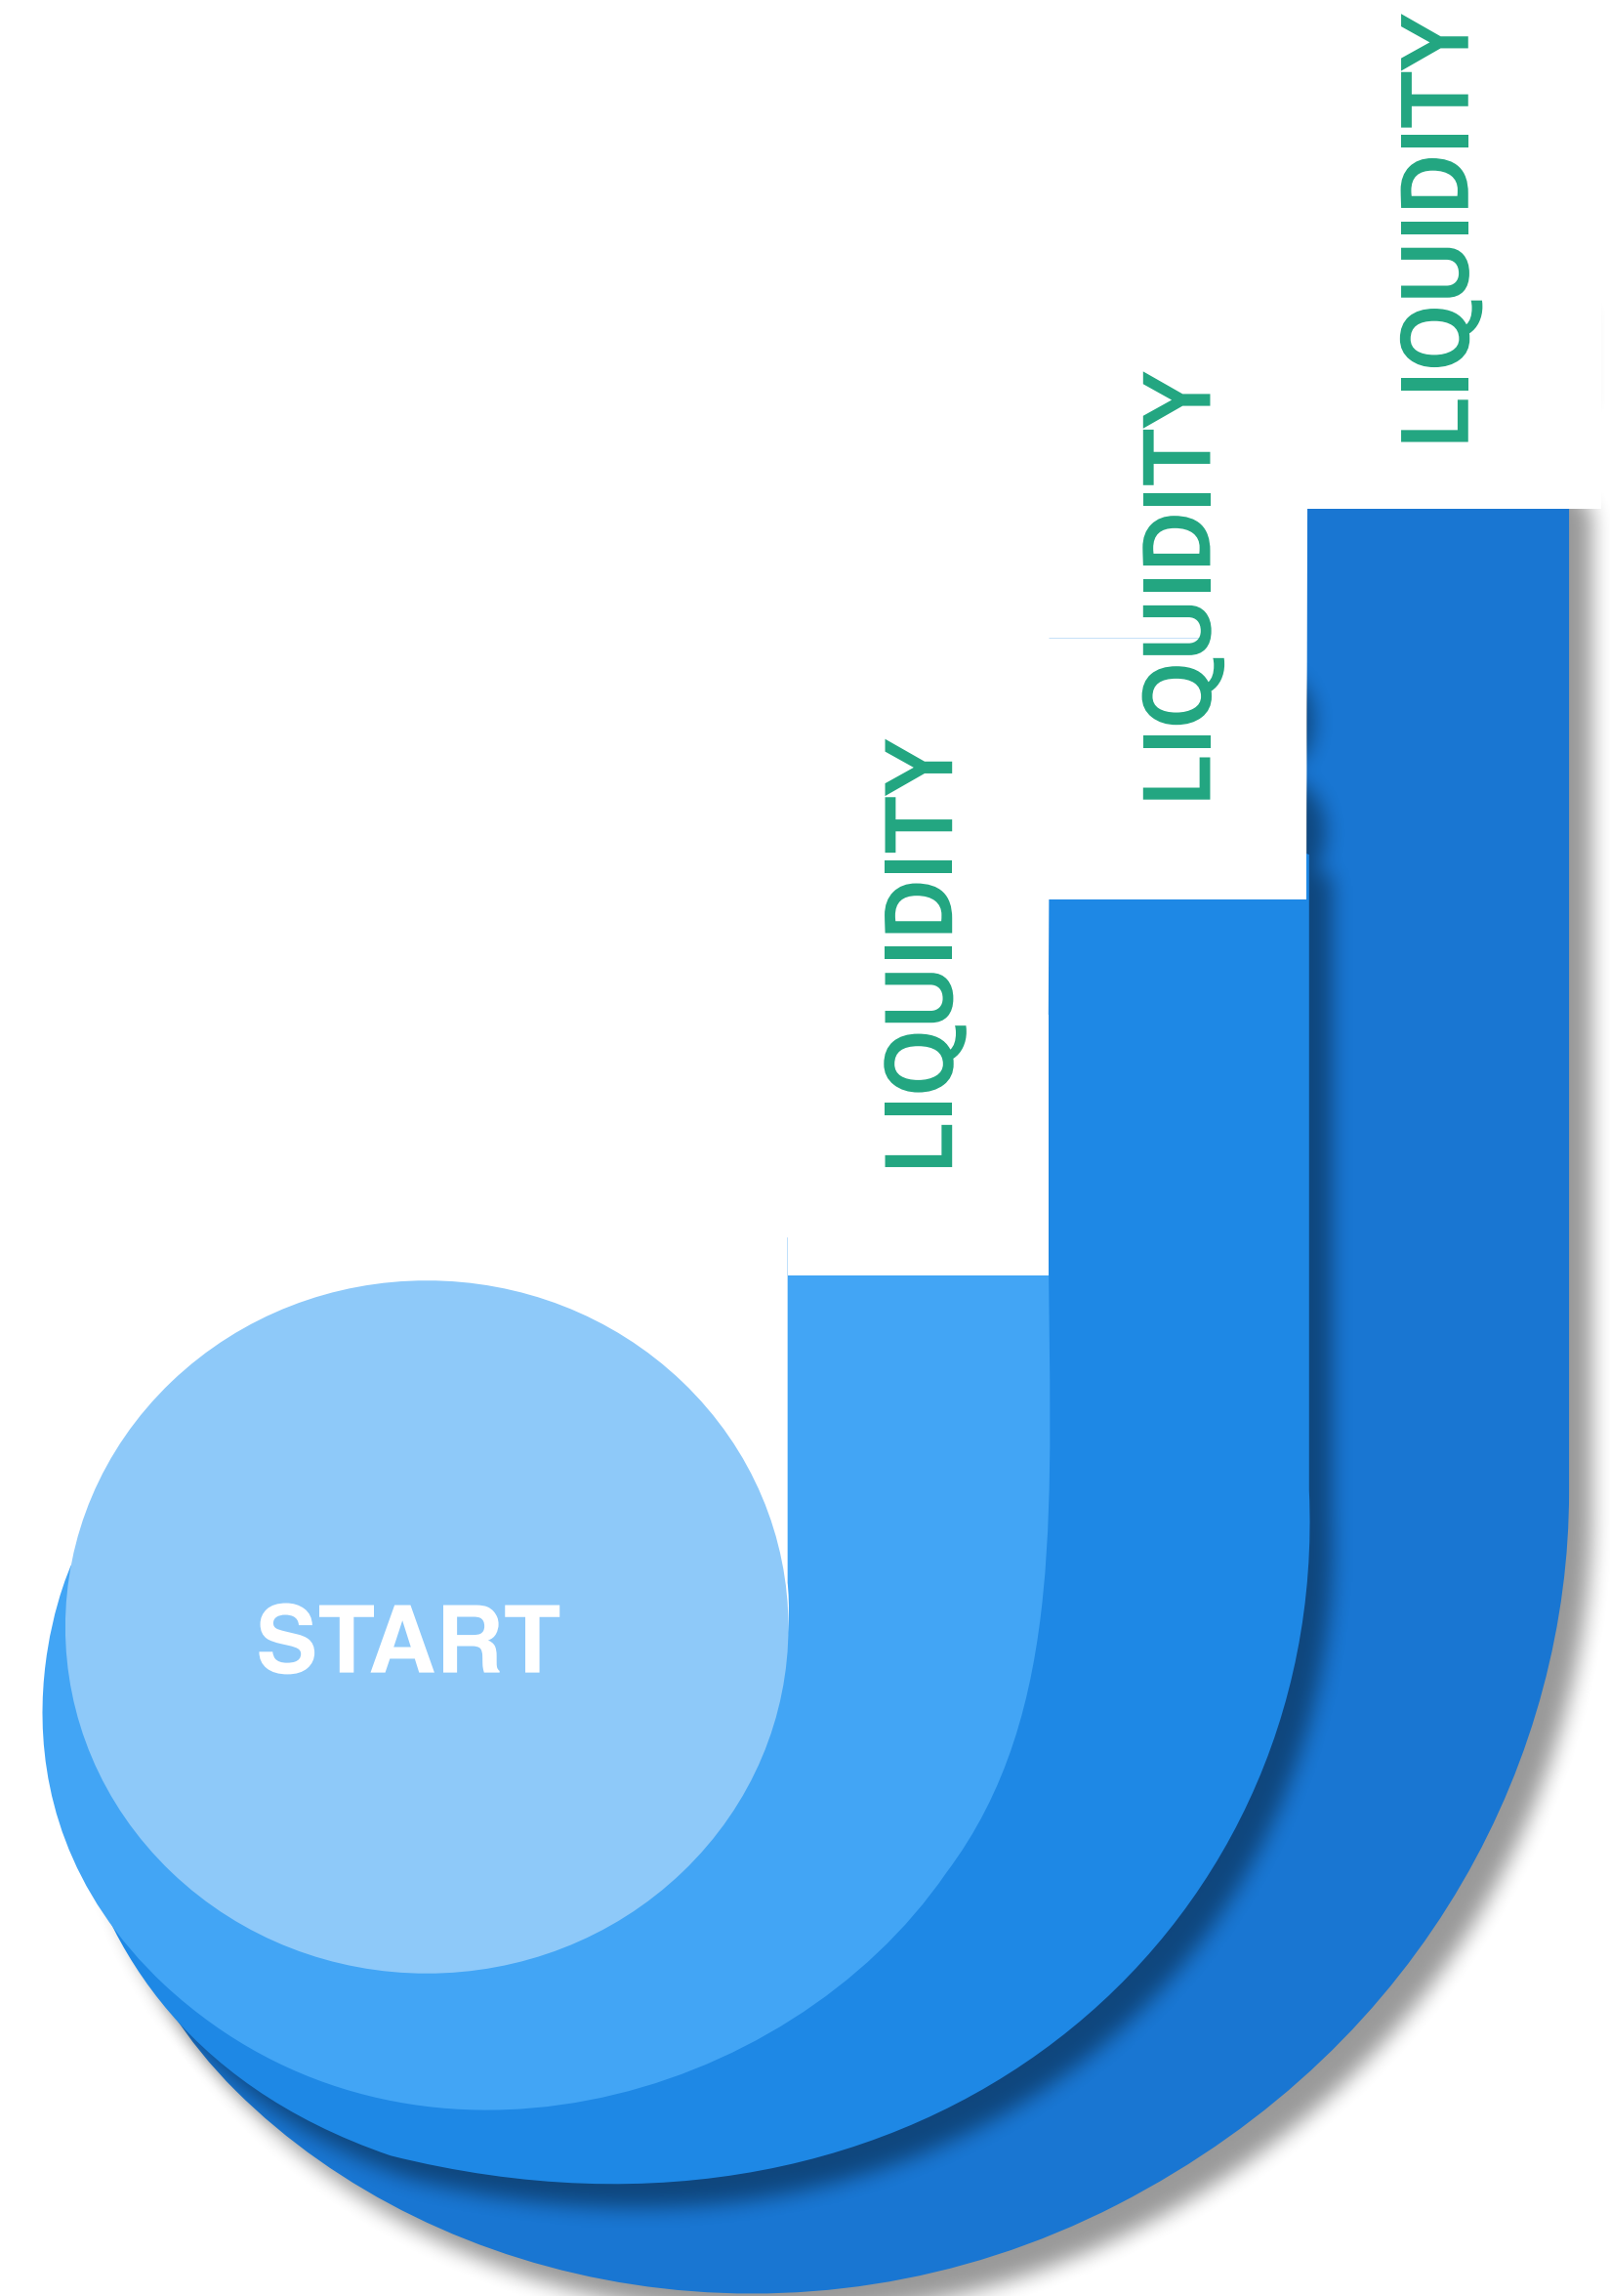

Burn Mechanism

What burns the Token?

Every transaction

30% of the 7.5% transfer tax (2.25% of transaction amount) will be burned in every transaction (send, swap, farming, etc).

Sending

Swapping

Farming

Depositing

Referral Program

An on-chain referral program has been implemented. Inviters can earn 5% of his/her friend's earnings forever.

Visit StableFarms.finance referral program page

Unlock your wallet to get your unique referral link

Share your referral link with your friends

Official
Collaboration

Official pre-launch collaboration with the drip network (drip.community)

2 pools will be added with no fees. This will boosr Stable and Drip to thrive in this bear market.

United we are stronger!

Contracts

Here are the StableFarms Main contracts that are deployed on BSC MainNet.

FSTABLE token :

0xaaef057b1969354865ecf7a06b620de615237d0c

FSTABLE MasterChef :

0xd8d4e52d757dad810a24c9047b3380b4a2b2f40a

FSTABLE TimeLock :

0x31CFc5cC11E09A5f592c77f7F29AB03938e28106
